

Listing of the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

1-15. (Cancelled)

16. (Previously presented) An aqueous phytopathological formulation comprising:
a hydrosoluble salt of at least one aminophosphate or aminophosphonate class herbicide;
at least one principal surfactant selected from alkylbetaines and alkyl(amidoalkyl)betaines; and
at least one additive being an alkylmonoglycoside or alkylpolyglycoside.

17. (Previously presented) The formulation according to claim 16, wherein the herbicide is a hydrosoluble salt of N-phosphonomethyl glycine.

18. (Previously presented) The formulation according to claim 16, wherein the herbicide presents a content of between 80 and 510 g/l, expressed in acid herbicide equivalents.

19. (Previously presented) The formulation according to claim 16, wherein the principal surfactant corresponds to one or more of the following formulae:

wherein:

R¹ represents a linear or branched alkyl group containing 3 to 30 carbon atoms;

R², which are identical or different, represent an alkyl radical; and

R³ represents a hydrogen atom or a -CH₂COOM radical or an alkyl radical; and

M represents an alkali metal, optionally sodium.

20. (Previously presented) The formulation according to claim 16, wherein the principal surfactant is present in an amount of between 20 and 180 g/l.

21-26. (Cancelled)

27. (Previously presented) The formulation according to claim 16, wherein the additive is octylglycoside, an octylpolycycloside, decylglycoside, a decylpolyglycoside, or a mixture thereof.

28. (Previously presented) The formulation according to one claim 16, wherein the additive is present in an amount of between 0 and 150 g/l.

29. (Previously presented) The formulation according to claim 16, wherein the principal surfactant and the additive have a proportion by weight of principal surfactant/additive ranging from 6/1 to 1/2.

30. (Previously presented) The formulation according to claim 16, wherein the principal surfactant and the additive represent a total amount of 60 to 180 g/l of the formulation.

31. (Previously presented) An aqueous phytopathological formulation comprising:
a hydrosoluble herbicide salt of
alkali metals, secondary or primary amines, diamines, alkanolamines, or sulphoniums,
with
N-phosphonomethyl glycine
at least one principal surfactant selected from alkylbetaines and alkyl(amidoalkyl)betaines; and

at least one additive being an alkylmonoglycoside or alkylpolyglycoside.

32. (Canceled)
